

Benham Disk #3: YOUR TURN!

1. Make your OWN lines this time.
 2. Cut out the disk above. It works better with heavier paper, like card stock.
 - 3 Push a pin through the middle, then push the pin through the eraser of a pencil.
 4. Spin the top. The faster the top spins, the more likely you are to see faint colors.
- Why does this happen? No one is quite sure.
Why do YOU think it is so?
